

Project Executable Files

Date	29/09/2026
Team ID	UNM1425EduGenie
Project Name	EduGenie
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

EduGenie/

```
├── backend/
│   ├── main.py
│   ├── qa.py
│   ├── explain.py
│   ├── quiz.py
│   ├── summarize.py
│   └── recommendations.py
├── frontend/
│   ├── index.html
│   ├── style.css
│   └── script.js
├── .env.example
├── requirements.txt
├── README.md
└── .gitignore
```

The exact filenames may be adjusted to match the final project folder. The important requirement is that the submitted files are logically organized and include all files required to run the application.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA – Local execution
Login Credentials (Demo)	NA – Authentication is not currently implemented
Platform / Hosting Provider	Localhost using Uvicorn
Repository Link	[Paste your GitHub repository link here]
Demo Video Link	[Paste demo video link here, if required]

Step 4: Run Instructions

1. Install **Python** on the system.
2. Download or clone the EduGenie project.
3. Open the project folder in a terminal or command prompt.
4. Create a virtual environment.
5. Activate the virtual environment.
6. Install the required dependencies using: `pip install -r requirements.txt`
7. Create a `.env` file based on `.env.example`.
8. Add the required **Google Gemini API key** to the `.env` file.
9. Start the FastAPI application using Uvicorn.
10. Open the local application URL in a web browser.
11. Select the required learning activity.
12. Enter the question, topic, or educational content.
13. Select/provide the learning level where applicable.
14. Generate the AI response and view/copy the result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No persistent database is currently implemented.	The application processes requests dynamically. Database support can be added as a future enhancement.
2	User authentication and authorization are not currently implemented.	The current version is designed primarily for student learning activities. Authentication can be added in a future version.
3	AI response time depends partly on the Google Gemini API and network connection.	Ensure a stable internet connection and valid Gemini API configuration.
