

Coding & Solution

Date	29/09/2026
Team ID	UNM1425EduGenie
Project Name	EduGenie
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	https://github.com/jeevitha15bca2025-cmd/EduGenie
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	FastAPI, Uvicorn
Key Features Implemented	1. AI-powered Question Answering 2. Personalized Topic Explanation 3. Automatic Quiz Generation 4. Educational Content Summarization 5. Personalized Learning Recommendations 6. Student-friendly web interface 7. Google Gemini API integration
Pending / Incomplete Features	User authentication, student dashboard and progress tracking, multilingual learning, and voice assistance are planned as future enhancements.
Setup / Run Instructions	1. Install Python and required dependencies. 2. Clone/download the EduGenie project. 3. Create a <code>.env</code> file and add the Google Gemini API key. 4. Install the required Python packages. 5. Start the FastAPI application using Uvicorn. 6. Open the provided local URL in a web browser. 7. Select a learning activity, enter the required content, and generate the AI response.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

EduGenie implements the core personalized learning requirements through a modular FastAPI backend and an interactive web interface. The Google Gemini API is integrated to generate educational responses for different learning activities. The code is organized for readability, maintainability, and future extension. API credentials are stored securely using environment variables rather than being exposed in the source code.
