

Technology Stack

Date	29/09/2026
Team ID	UNM1425EduGenie
Project Name	EduGenie
Maximum Marks	2 Marks

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML5, CSS3, JavaScript	Used to create a simple, interactive, and user-friendly interface for students to select learning activities, enter content, generate responses, and view results.
2	Backend / Server-Side	Python, FastAPI	FastAPI provides a lightweight and efficient backend for handling API requests, processing student inputs, and communicating with the AI service.
3	Database / Data Storage	No database currently used	The current EduGenie implementation does not require a persistent database. Student requests are processed dynamically and AI-generated results are returned to the user.
4	Cloud / Hosting / Deployment	Localhost / Uvicorn	Uvicorn is used as the ASGI server to run and test the FastAPI application during development.
5	Version Control & CI/CD	Git / GitHub	Used to manage source-code versions, track changes, maintain project history, and support collaboration.
6	Third-Party APIs / Other Tools	Google Gemini API	Provides Generative AI capabilities for question answering, topic explanations, quiz generation, summarization, and personalized learning recommendations.
